Table 1: Words/phrases used to pattern match on outcomes of interest. Each word to match represents a portion of a word to match on. For example, the word 'sex' will match on 'sexual assault' and 'sex offense' since 'sex' appears in each of these descriptions.

Outcome	Words to Match
Sexual Assault	sex, rape, fondling, fondle
Alcohol Violations	alcohol, dwi, intox, drink, dui, drunk, liquor, driving under the influence, dip, abcc, underage, dwi, underage, pula, owi, mip, under age, beer, wine, booze, minor in possession, ovi
Drug Offense	drug, narcotic, marijuana, heroin, overdose, cocaine, controlled substance
Robbery/Burglary	robbery, burglary, unlawful entry, breaking and entering

Note:

'dwi' abbreviation for 'driving while intoxicated'.

'dip' abbreviation for 'drunk in public'.

'abcc' abbreviation for 'alcohol beverage control comission'.

'pula' abbreviation for 'person under legal age'.

'owi' abbreviation for 'operating while intoxicated'.

'mip' abbreviation for 'minor in possesion'.

'ovi' abbreivation for 'operating vehicle intoxicated'.

Table 3: DeChaismartin decomposition of TWFE with primary models. Reading from left to right: the first column represents the model specification, the second column represents the sum of the positive weights, the third column represents the sum of the negative weights, the fourth column represents the number of negative average treatment effects on the treated, and the fifth column represents the number of positive average treatment effects on the treated. Note that NAs mean that the TWFEWeights package cannot estimate negative weights for a specification.
